Fluorescent Whitening Agents

Fluorescent Whitening Agents

Fluorescent Whitening Agents are used in detergents for a whitening, brightening effect. They capture UV light, normally invisible to the naked eye, and transform it into visible light. This makes textiles appear cleaner and brighter. Whiteners in detergents ensure that clothes keep that crisp, bright finish.

Ciba® TINOPAL®

DSBP type Fluorescent Whitening Agents(FWA) are particularly suited to care for clothes and keep them looking new longer. Their high stability and solubility properties make them the product of choice for a broad range of detergent formulations.
